## **AGM 2022/2023**

### **Student Representative's Profile**

**Stephen-Paul Boffa** is a third year Mechanical Engineering student who is also the current vice president of UESA. Over the two and a half years as an engineering student with the UM, he has learnt to balance the relatively tough academic aspect with a fruitful social life as well, by taking part in activities hosted by KSU, Students' Fest and of course, UESA.

By being in UESA he has learnt essential skills that are not specifically taught in the course, such as time management, organising and carrying out meetings and talking to professionals in various sectors.

He is joining the Chamber of Engineers as the student representative to be able to experience the professional aspect of engineering and how the industry works, whilst also keeping a link between the students and the Chamber. He is committed towards providing a student insight into the decision making process.
