Completion of the Evaluation Procedure of MCAST Bachelor (hons) Engineering Programmes

Dear Dr Camilleri,

On 22 November 2022, we submitted the final evaluation reports regarding the Pre-Warrant Qualification Course (PWQC) and the four Bachelor (hons) Engineering programmes in Electrical and Mechanical Engineering run by MCAST. These reports contain the final assessment of the ASIIN expert team regarding the equivalency of the outcomes of these programmes with the “EUR-ACE® Framework Standards and Guidelines”. In both cases, the experts explicitly confirm that after a three-year evaluation procedure MCAST has provided satisfactory evidence that the PWQC as well as the study programmes are fully aligned with European Bachelor level engineering education standards. Having said this, there remain a number of recommendations as part of the continuous improvement cycle of academic degree programmes, which however do not compromise the overall positive result. A summary statement can be found in the evaluation reports (see chapter “Executive Summary” in the respective report, which also has been presented to the EPB during our last site visit in October 2022).

Before this background, ASIIN considers the three-year evaluation process completed with no need to hold another event in the framework of this project, which has thus come to an end.

With my best regards

A handwritten signature in blue ink, appearing to read "Iring Wasser". The signature is stylized with a large, sweeping initial "I" and a cursive "Wasser".

Dr Iring Wasser

Managing Director
