

MALTA VALSIR TECHNICAL SEMINAR

HRV - UFH Systems

Chamber of
Engineers

New buildings request hi-tech plumbing system solutions that combine sustainability, thermal comfort, and energy-saving. HRV is the main answer to these needs today.

Indoor Air Quality, such as thermal comfort, is today recognized as an important aspect related to the comfort of people in a building.

Humidity, CO₂, and other pollutants are impacting the quality of life inside buildings. The HRV System is constantly providing air exchange with reduction of pollutants with an important air filtration that comes from outside reducing the presence of pollen, dust, and particulate.

Thanks to the heat recovery, HRV allows reducing energy losses due to air exchange in line with modern standards of building sustainability.

HRV SEMINAR - DATE & TIME: 10th November 2022 at 18:00

- Description of Heat Recovery Ventilation systems
- Characteristics of HRV
- Valsir AriaSilent
- Main design aspects
